Baseline Assessment

The Baseline Fertility Assessment is designed for couples who want to proactively assess their fertility status or couples who may be experiencing trouble conceiving. The Baseline Assessment includes an at home semen analysis and will determine if male factors are present and a discussion of the results and general recommendations on how to improve the chances of conception.

Initial Evaluation

The Initial Evaluation allows men with an abnormal semen analysis to begin an in-depth medical assessment, to determine the cause of the male factor and explore if it is reversible.

Recurrent Pregnancy Loss (RPL) Consult

The RPL consult consists of a thorough evaluation of the couples conception history and/or IVF history and a complete review of the male's lifestyle, medical history and physical exam.
